CINELUX

Smart Cinema Ticket Booking System

WEB APPLICATION | UNIVERSITY PROJECT

DEFINING THE PROJECT SCOPE

System Overview

Cinelux is a modern, web-based platform designed to streamline the cinematic journey. From discovering the latest blockbusters to reserving the perfect seat, the system offers an intuitive, high-performance interface for movie enthusiasts.

The AI Layer

The system integrates advanced recommendation logic that analyzes metadata and behavioral patterns to suggest films. It transforms a simple booking tool into a personalized entertainment guide.

SYSTEM BOUNDARIES

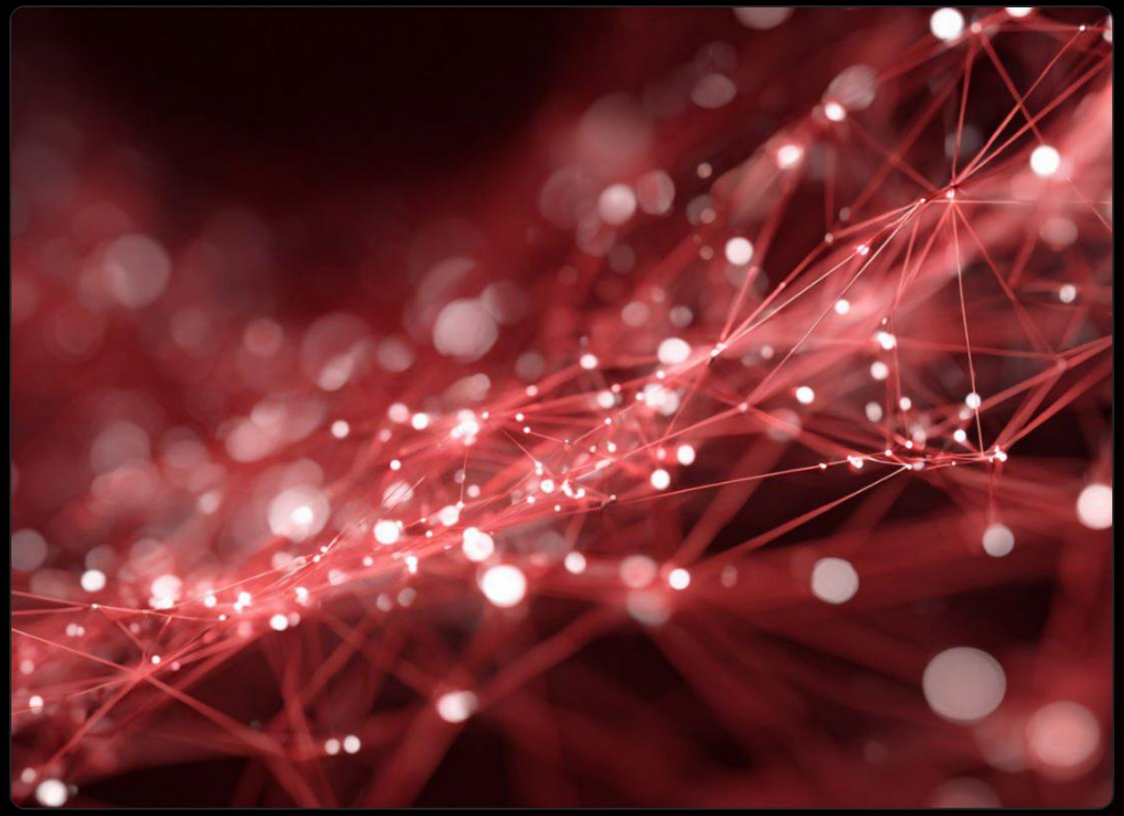
FUNCTIONAL AREA	IN-SCOPE (✔)	OUT-OF-SCOPE (✖)
User Registration & Login	✔	
Movie Listing & Details	✔	
Interactive Seat Selection	✔	
Ticket Booking & Confirmation	✔	
In-App Notifications	✔	
Real Online Payment Integration		✖
Food & Branch Management		✖
SMS / Email Notifications		✖

AI RECOMMENDATION TECHNIQUES

Personalization Engine

The core intelligence of Cinelux rests on two fundamental filtering pillars. These techniques ensure that users are presented with content that resonates with their unique cinematic taste.

By mapping movie metadata against user behavior, we reduce choice paralysis and enhance the discovery experience within the application.



DUAL-FILTERING APPROACH

Content-Based Filtering

Focuses on movie attributes. It recommends films based on metadata such as genre, actors, directors, and plot descriptions from the user's history.

Collaborative Filtering

Analyzes similarities between users. It identifies users with similar viewing patterns and suggests movies they enjoyed that the target user hasn't seen yet.

PROJECT ASSUMPTIONS

- **Academic Context:** The system is built strictly for educational purposes and portfolio demonstration.
- **Simulated Transactions:** All payment flows are simulated; no real-world bank connections or gateways are used.
- **Manual Curation:** Movie metadata is manually pre-loaded into the database rather than fetched from external APIs.
- **Lightweight AI:** Recommendation algorithms are simplified, focusing on content similarity and basic interaction matrices.
- **In-System Alerts:** All user notifications are contained within the browser session (No SMS or Email).

MODERN WEB INTERFACE

Minimalist Dashboard

Our UI follows a "Dark Mode" aesthetic, reducing eye strain and allowing high-vibrancy movie posters to take center stage. The layout is optimized for high-performance interaction and clear calls to action.

The seat selection interface uses svg mapping for precise, real-time availability updates without full page refreshes.

STANDARD BOOKING WORKFLOW

Discovery

Browse listings with AI suggestions.

Selection

Pick a movie, time, and theater seat.

Simulation

Confirm booking via mock payment.

Tickets

Receive digital confirm & notification.

PROJECT MISSION

100%

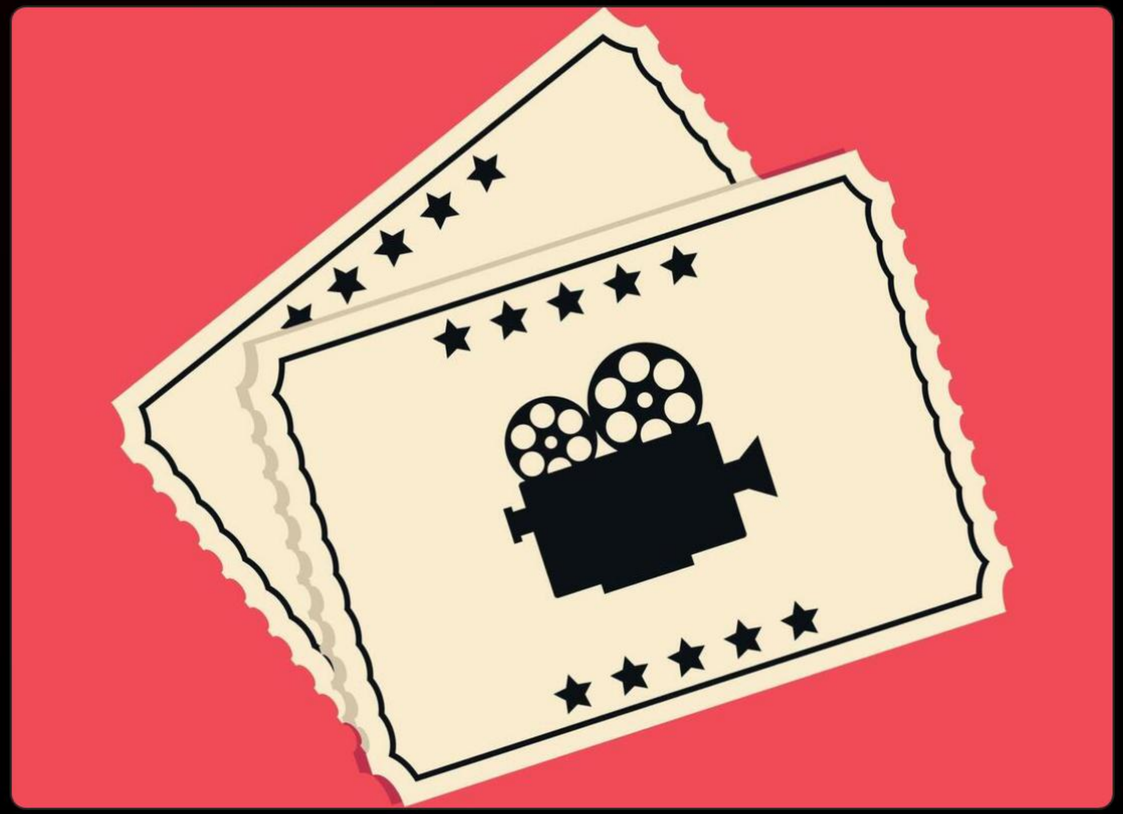
SIMULATED EXCELLENCE

The primary focus of Cinelux is to demonstrate technical proficiency in web development and intelligent system architecture within a controlled academic environment.

"A great cinema experience begins long before the lights go down."

— The Cinelux Design Philosophy

VISUAL BRANDING ELEMENTS



Iconography

Cinelux utilizes a custom set of minimalist icons designed for high scannability. From seat types (VIP vs. Standard) to ticket statuses, every visual element is crafted for professional clarity.

The consistent use of red-on-black creates a signature look that is synonymous with the premium cinema experience.
